Abstract

Despite the rapid development of the poultry industry in Turkey, families in rural areas continue the habit of making village poultry production. Village poultry plays an important role of reducing household poverty and closing the gap of animal protein in our country as well as in most of the developing countries. They also provide manure and pest control. This extensive production is often carried out by women and children. In this review examined previous studies that have been made in this issue in the Çanakkale, Antalya, Tokat, Batman Provinces, discussed issues on village poultry production model of according the our country.

Keywords: Turkey, village poultry, rural area, village poultry model
