# AN EVALUTAION ON BRONZE MADE MOVABLE CULTURAL ASSETS IN ARTVIN-ŞAVŞAT FOUND BY CHANCE

Osman AYTEKİN - Hasan BUĞRUL

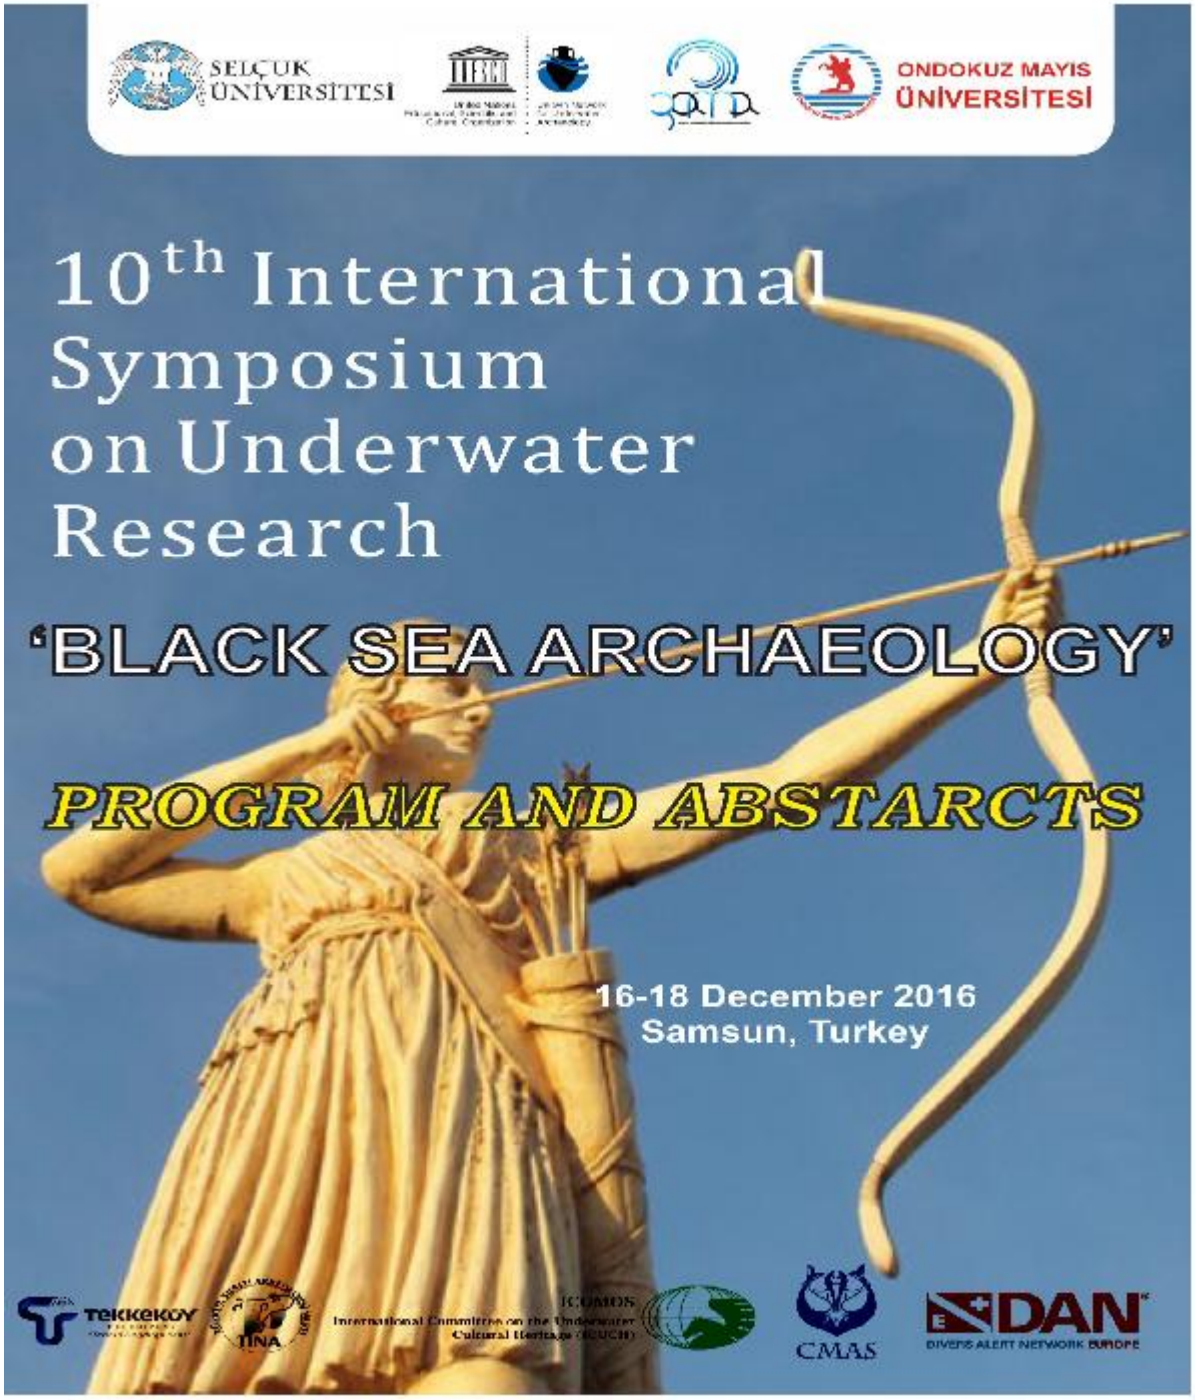

*Yuzuncu Yil University – Art History / Van Vocatinal High School*

aytekinosman@yahoo.com / hbugrul@gmail.com

The ancient period of Artvin, located in the Eastern Black Sea Region and on the border of Georgia, has definitions that are not based on archaeological evidence at the present time. The study we have been conducting since 1998; by different academicians and in cooperation with the Ministry of Culture and Tourism in the region, mainly includes Mediaeval Age and the later periods. The "Excavation and Restoration Work" has been carried out in my presidency and continued since 2007. The excavation work located in the center of Artvin Province, Şavşat District, Merkez Söğütlü settlement has enabled us to access significant archaeological findings belonging to the Middle Ages-Georgian, Modern Ages-Ottoman periods.

Prehistoric and Historical periods need to be evaluated together in order to reveal the past of a place in chronological order.Considering this fact, in this study; 7 movable cultural assets found in the rural area of Bzata settlement of Meydancık Village in 1932, district of Şavşat, and delivered to Ankara Ethnography Museum including 2 perforated axes, a pipe ax, a double-ax, a perforated anchor and a bullion will be presented.

The mentioned movable cultural assets were published by Dr. Kurt Bittel as an article in a magazine in 1933. However, the researcher made an evaluation on the works only in the Museum, without coming to the locality. In the new light of the world and Turkish archaeological data since 1933; it is aimed to achieve a periodical result by reevaluating these bronze artifacts comparatively.
